BULLETIN 19

OFFICIAL CARS of the CANADIAN PACIFIC RAILWAY

by Omer S. A. Lavallee.

Editorial Address:

P. O. Box 22, Station "B"
Montreal, Canada.

I N T R O D U C T I O N

Sir William Cornelius Van Horne was one of the big names in the administrative history of the Canadian Pacific Railway. Brought in by the Directors of the Company to superintend the construction of the pioneer Canadian transcontinental railway, he established his headquarters at Winnipeg, and in the few intervening years between the date of his appointment and the driving of the last spike, he established a reputation for getting things done, quickly and effectively. Supervising the construction of a railway is ordinarily no small task, but the building of the Canadian Pacific, so extraordinary in almost every other sense, imposed its burden particularly on Van Horne, due to the length of the lines of communication. His headquarters at Winnipeg were about midway on a main line which was, at that time, more than 2,900 miles long. His responsibilities constantly took him from his headquarters to the scene of construction, or to the Company headquarters in Montreal, and, in those trying days between 1883 and 1885, Van Horne spent more time on the road than he did anywhere else.

Consequently, his official car SASKATCHEWAN might be said to have been the symbol of Sir William. Gracing the rear of the PACIFIC EXPRESS, coupled to a freight, mixed, or supply train, or standing in a siding, the SASKATCHEWAN was Sir William Van Horne's "home on the rails". It participated in many notable events, too. When it had but two years' service with the Company, the car conveyed its distinguished occupant and his guests to Craigellachie, in Eagle Pass, British Columbia, on that November 7th in the year 1885, when the last spike was driven. After the Canadian Pacific Railway had become an accomplished fact and had begun to spread its roots through the Canadian countryside, Van Horne experienced a speed demonstration in this car between Brandon and Winnipeg in August, 1906, when engine 832, a 4-6-0, pulling a baggage car, the SASKATCHEWAN and Sir William Whyte's MANITOBA, attained a speed of $79\frac{3}{4}$ miles per hour near Bagot, Man. The whole 134-mile trip took only 120 minutes and despite the smooth riding qualities of the SASKATCHEWAN, (which at that time was equipped with all of the amenities of life in 1906, including the Gould electric light system) it must have been a torturing trip over roadbed never meant for anything approaching that speed.

In this manner, he marked significant events in his career, like many another railway official. The SASKATCHEWAN served him as his office on the road from the time it was bought new from Barney & Smith (Dayton, Ohio car builders) in 1883. Sir William has gone to his reward these many years, but the old SASKATCHEWAN, now known simply as car 38, is still in use. Many people have been entertained by the stories of this CPR pioneer, and about the railway he pushed to completion, but what about the SASKATCHEWAN, and about the other official cars which have been in use these seventy-four years? The answer to that is the purpose of this compilation.

THE PURPOSE OF
THE OFFICIAL CAR

To enable the railway operating official to function efficiently, ubiquitously, throughout the division, district or region that is his particular care, an official car is assigned to each division Superintendent (except those in charge of Terminals), district General Superintendents, and regional Vice President and General Manager. Special cars are assigned as well to the Chairman of the Company, its President, and its operating and traffic Vice Presidents. There are a number of spare cars in the same category which are not specifically allotted, for the use of the non-operating Vice Presidents, other officials and traffic officials, whose requirements in a transportation sense are not as well defined or regular as those of the operating staff.

For the use of the general officers aforementioned, the Company maintains a fleet of official cars, many of them modern steel cars. In practice, it might be said that all officers above the rank of division Superintendent are assigned steel cars, while the older wood-constructed cars, are used by the division officers. The divisional cars are most familiar, because the Superintendent's art regularly calls for him to act as administrator, judge, practical railwayman, and not infrequently, somewhat of a magician. His job is in the intermediate stage between strict railway operation, which is the duty of his subordinates, to the same degree as administrative duties are, or should be, the particular care of his superiors. Consequently, he has to be everywhere at once, literally and figuratively, and the official car provides his sleeping, eating and office facilities on the road.

Notwithstanding the sleek impressiveness of the steel official cars, the wood-built cars are the interesting ones to the historian; they are the cars with individual stories behind them -- the cars with character. They are old in a chronological sense, but excellent workmanship and intelligent maintenance throughout the years have been responsible for keeping these cars in service.

Contrary to the general impression, official cars are not unduly elaborate and seldom provide facilities not found in the average home. They are designed in consideration of the comfort of those who use them -- men who frequently spend a recognizable portion of their lives travelling over the system, observing for themselves what changes and improvements are necessary to keep the railway plant in order and functioning efficiently.

SIX THOUSAND FEET
OF "BUSINESS"

At the present time (January 1955) there are sixty four official cars used by the Canadian Pacific Railway Company and by its subsidiary railway companies in Canada. Twenty-six of these cars carry names rather than numbers, and they are assigned to the officers of General Superintendent's rank, and upwards. Twenty six other cars are numbered, the majority of which are used for division Superintendents, and finally, there are twelve cars assigned specially, such as instruction cars, dynamometer car, vision test car, pay car, school cars and a forestry car, all numbered, and an unnamed

and unnumbered dental car.

These cars comprise but slightly more than half of the total number of railway cars utilized for these varied purposes in the history of the Company. Up to the end of 1954, there have been 123 known cars collectively classifiable as "official" cars which include the regular business or so-called "private" cars, all of the listed special types of cars, as well as some others including hospital and photographer's cars. By the way, the term "private car" is a misnomer as far as railway official cars is concerned. A "private car" is exactly what its name implies -- a railway car owned by a private individual such as the car "Cromarty" which, before its purchase by the CPR, belonged to capitalist sportsman J.K.L. Ross, or the "Eatonia" -- the personal property of Timothy Eaton, magnate of the Canadian retail trade. Incidentally, both of these cars were purchased by the Canadian Pacific Railway for conversion to official cars, and both are still in use. Just by the way, Mr. Eaton had another car named "Eatonia", which the Canadian National Railways later purchased from him.

If all of the one hundred and twenty-three official cars, of which we have record, could have been in existence at once, so that they could be coupled together, they would make a train some six thousand seven hundred feet long, embracing just about every style of passenger train car that has ever rolled the rails. They have been designated by various means, some numbered and some named. Many of them go back pretty far, too. The oldest car of which there is definite record is the venerable "Sherbrooke" assigned to the General Manager of the Quebec Central Railway; this car was built for the Baltimore & Ohio Railroad in the United States as the car "Maryland" in the year 1872. Candidate for the oldest official car in use on the Company's line proper seems to be an arbitrary choice between car no.1 and car no.37, both, coincidentally enough, assigned to divisions in the New Brunswick District. No official record has been preserved as to the building date of either of these cars, but they are at least seventy five years old. Car No.1 was acquired in 1882 from the Saint Lawrence & Ottawa Railway, who undoubtedly had had it for some years prior to its disposal. Car 37 was acquired with another car from the Manitoba & North Western Railway when that line was leased by the CPR on May 1st, 1900, but almost certainly was acquired second hand by the M&NW, probably from a United States road.

As to the long and short of the interesting story of official cars of the world's greatest privately-owned travel system, the longest business car ever owned is still in use; it is the presently-designated car ECH LOMOND and it is 77'4" long. The shortest car ever owned was second no.11, formerly Manitoba & North Western Railway No. C-2. It was rebuilt to a boarding car in 1926 and later scrapped; compared with it, a caboose was roomy -- second no. 11 was only twenty nine feet long over frame.

Between the two extremities have been assembled as interesting and representative a collection of official cars as the most discerning Master Car Builder could have wished for. They were a sight to behold, too, in the days before steel cars, when all of the Company's passenger train cars were finished in natural varnished wood, rather than in the tuscan red of the present colour finish.

Among the types of wood used on official car exteriors are mahogany, whitewood, pine and cherry.

A SLEEPING CAR NAMED
"AUSTRALIA"

The desire to assemble a record of Company official cars started back in 1946 when the author took a picture of car No.4 at Smiths Falls, after reading a story about Mr. Van Horne's SASKATCHEWAN. Subsequently showing the picture of No.4 to a veteran of the official car service, it was learned that No.4 had once been a sleeping car named "Australia". Pursuing the thread from there, records indicated that it had also borne the name SASKATCHEWAN at one time, and here was a ready-made dilemma ! Mr. Van Horne's first SASKATCHEWAN, the one referred to at the beginning of this story now carries the number 38, and in addition a steel SASKATCHEWAN had been built in 1930 and was still in use, making three SASKATCHEWANS. Solution of this problem innocently unlocked a flood of other names, dates and units including, incidentally, another SASKATCHEWAN. When all of this data was listed, tabulated and catalogued, it was found that the most frequently used name was BRITISH COLUMBIA, which has been carried seven times by six different cars (one car having used it twice, separated by an interval when it carried another name).

The most consistently used name is METAPEDIA, which has been carried continuously from 1882 to the present date by three cars. The name SASKATCHEWAN was introduced in 1883, and except for a year's gap in 1916-17, that name as well has been used continuously since 1883.

The reader may wonder about the selection of some of the names. Many have been bestowed because of personal associations of men who used the cars. For example, each car assigned to Sir Thomas Shaughnessy bore the name KILLARNEY, an ancestral association, while the cars used by Sir Edward Beatty were usually called THOROLD after his Ontario birthplace. Thus, as cars were redistributed from time to time, the names changed with the redistribution, with the result that most of the names presently used have been carried several times on as many cars.

As far as numbering is concerned, one- and two-digit numbers have been used consistently in recent years, though there were a few exceptions with some of the earliest cars. Two cars have had the distinction of carrying the number "1" and it is more by accident than design that the present bearer of the initial digit is one of the candidates for the distinction of being the oldest car on the system. There is absolutely no relationship between the age, size or use of any cars except that, at the present time, division cars carry numbers between 1 and 39, while special cars are numbered above 50. The number 13 has never been used to designate an official car.

GENEALOGY

The assembly of 50 names and 77 numbers, which had been used 242 times on 123 cars, into an understandable list, presented an almost hopeless task. It is impossible to refer to the cars by any particular name or road number, and the well-meaning railwayman who reminisced about "old car number ten" might well be asked which of four cars with that number he referred to.

After trial and error, a system of listing the cars was worked out so that they might readily be located on either one of two lists. A list of cars was assembled (List A) in chronological order, that is, in the order of the date upon which the various units became Canadian Pacific Railway official cars. Then the various units were numbered consecutively, and to distinguish these chronological list numbers from the road numbers, we have placed our initial "L" in front of them. Thus, car No.38 (the present one) is designated "L7" as it is the seventh in the author's chronological list. To locate a given car, reference must be made to List B which is a cross reference between each name and number used, and the various years from the incorporation of the Company. Thus, to find out what cars the Company owned in 1916, for example, the List B has only to be consulted and a note made of the names and numbers used in that year. If details are desired about the particular cars, the L number should be noted for each unit, and the details secured afterward from List A.

While a great deal of time and patience has been expended to make this record as complete and accurate as possible, the possibility that an early unit has been missed is not beyond the realm of probability and additions or corrections to the lists will be appreciated. While the compilation of this work has been carried on over a number of years and a great many official records examined out of a desire to be as accurate as possible, past experience has shown that first versions of such lists have seldom been flawless and if this compilation serves only to bring out some mistakes or omissions, the time used in its compilation has been well spent.

ACKNOWLEDGMENT

Finally, acknowledgment must be made of the indispensable cooperation of my very good friend, Mr. John Tinkler, formerly of the office of the Chief of Motive Power & Rolling Stock of the Canadian Pacific Railway -- now enjoying his retirement. He answered unanswerable questions and probed deep into old records, whose location was known only to him, from memory. Without his help, this record of seventy-five years of official cars of the Canadian Pacific Railway Company would have been impossible.

OMER S. A. LAVALLEE

Montreal, January 1st, 1955.

SUPERINTENDENT'S CAR

L57 The pay car was the only official car employees looked forward to seeing. Like many official cars, this one was rebuilt from a passenger car. It was one of at least eight pay cars built as such, though other official cars were pressed into service from time to time as pay cars. Note the double end platform doors used as entrance and exit when paying large numbers of men. The opposite platform had the conventional single door.

L38 Though spartan in appearance and unpretentious in accommodation, the 35-foot official car was once a familiar sight everywhere on the Company's lines. The design was evolved at the turn of the century to satisfy an urgent need for Superintendents' cars. A later variation was equipped with a clerestory roof. Nearly two dozen of these little cars were built, but only five remained at the end of 1954.

- Plr. - Parlour Car.
- Airbrk. - Air Brake Instruction Car.
- s - Steel construction
- ss - Steel sheathing, wood construction.
(If no symbol, indicates wood construction and sheathing).

ADDITION NO.1

OFFICIAL CARS OF THE CANADIAN PACIFIC RAILWAY

C.R.H.A. Bulletin 19

January 1957

Mr. J.E. Thinkler advises that, in addition to official car L64 which appears in our compilation on Canadian Pacific Railway official cars, another car was taken over from the Alberta Railway & Irrigation Co. on March 31st, 1909. This was the "Calgary", and though it was destined to be scrapped when taken over, it was actually used as an "unofficial" official car (as Mr. Thinkler puts it) until being scrapped at Winnipeg on April; 30th, 1916. With this note, readers may care to add it to their copy of Bulletin 19 as entry L64A.

Note: this addition was published in the CRHA News Report issue No. 65 dated Jan. 1957
